

Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually a device made out of top quality materials intended to be able to withstand the most demanding procedures and work environments. This particular piece of equipment could enable the one driving to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the entire load or the arms in order to facilitate much more precise carrying and placement in a quicker and more effective way.

The only one of its kind fork pocket design enables the person operating it to be able to safely swing the unit's blades without any fear of destroying the positioning cylinders. This could allow the worker the alternative to either execute independent or simultaneous fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on existing units.
